

**Wawa Timeline of Activity – Plumstead Twp.  
Updated 12/16/05**

**Dec. 5** Wawa's environmental consultant continues to coordinate the residential potable well sampling project. In addition, potable water sample results from the five carbon filtration units installed on affected wells were received. The results indicated that there were no tested compounds above the PADEP limits.

**Dec. 12** Wawa's environmental consultant implemented the residential potable well sampling program and will continue to sample the designated residential wells in the township. A monthly sampling program was developed for the five carbon filtration systems installed at potable wells in the area. Additional Site Characterization work is being planned and will include a geophysical investigation that would aid in the determination of groundwater flow and in a more thorough understanding of the hydrogeology in the area. Along with that work, an investigation will be conducted to identify potential contaminant pathways in the immediate area surrounding the site.
