

**Wawa Timeline of Activity – Plumstead Twp.
Updated 12/26/05**

Dec. 19 The residential potable well sampling was completed with the exception of two residential wells that should be sampled in the near future.

Dec 22 The geophysical work was conducted at the site and results from the investigation will be available the week of January 9, 2006. This information will aid in the determination of groundwater flow directions as well as assist in the selection of any required remedial efforts in the future. In addition, the investigation to determine potential contaminant pathways continues to move ahead.

Dec 26 Additional sampling of most of the residential potable wells with carbon filters is scheduled for this week. The remainder of the potable wells with carbon filters will be sampled the week of January 2, 2006.
